

Broadband over Power Lines (BPL) will interfere with most, if not all, of the high frequency spectrum now used by amateur radio and government agencies.

BPL has shown that it will interfere with existing and future uses of the HF radio spectrum to the point that HF communications will greatly impacted. This could mean the loss of property or life in an emergency situation.

I urge the FCC to go slowly and to enforce their own existing regulations concerning Part 15 devices before lessening these restrictions, as would be the case with BPL.
